

Yannich Thay Carlos

Maputo, Moçambique | yannich6thay@gmail.com | [LinkedIn](#) | [GitHub \(Portfolio\)](#)

PROFESSIONAL SUMMARY

Dedicated and detail-oriented Computer Science student specializing in Network Security, Threat Defense, and Vulnerability Assessment. Certified by Google in Cybersecurity Professional concepts, with hands-on experience in Python, Linux, SQL, SIEM tools, and malware detection. Eager to apply analytical skills and technical training to a dynamic cybersecurity role.

EDUCATION

ISUTC – Instituto Superior de Transportes e Comunicações
Bachelor of Science in Computer Science

Maputo, Moçambique
Present

EXPERIENCE

Programming Fundamentals Teaching Assistant / Monitor

Mar. 2026 – June 2026

ISUTC – Instituto Superior de Transportes e Comunicações

Maputo, Moçambique

- Served as a Teaching Assistant/Monitor for the Programming Fundamentals course at ISUTC, helping fellow students build a strong foundation in computer science and logical thinking.
- Assisted students during lab sessions and practical classes, clarifying doubts on programming logic, control structures (if/else, loops), variables, and data types.
- Collaborated with professors to identify common learning challenges and reinforced explanations of complex topics.
- Fostered a collaborative learning environment by encouraging critical thinking and independent problem-solving (debugging) skills.
- Reviewed and provided constructive feedback on coding exercises, helping students adopt best practices and coding standards from the start.

PROJECTS

Network Traffic Analyzer & Live Cyber Dashboard | *Python, Scapy, Rich, Threading, TUI*

2026

- Engineered an asynchronous, thread-safe network traffic analyzer and mini-NIDS using Scapy and Rich to perform real-time packet sniffing, protocol mix parsing, and host volume analytics.
- Built a dynamic 4 FPS TUI dashboard with live threat detection watchlists for high dynamic port connections (> 1024) and automatic IP privacy masking for public broadcasting.
- Implemented explicit thread locking (`threading.Lock`) and non-blocking capture logging with automated CSV forensic exports for digital investigations and auditing.

Multi-Threaded TCP Port Scanner & Banner Grabber | *Python, Socket, Concurrent.futures, Regex*

2026

- Developed a fast, zero-dependency multi-threaded TCP network scanner using pure Python standard libraries (`socket`, `concurrent.futures`) for rapid port discovery.
- Implemented service banner grabbing to interrogate open ports and extract initial software welcome headers, service types, and version information.
- Integrated foolproof Regex (`re`) input validation for IPv4 target ranges and built-in export modules for structured CSV and plain-text forensic reporting.

CERTIFICATIONS & LICENSES

Google Cybersecurity Professional Certificate : Google (Aug. 2024)

Automate Cybersecurity Tasks with Python : Google (Aug. 2024)

Assets, Threats, and Vulnerabilities : Google (July 2024)

Sound the Alarm: Detection and Response : Google (July 2024)

Connect and Protect: Networks and Network Security : Google (Jan. 2024)

Play It Safe: Manage Security Risks : Google (Jan. 2024)

Foundations of Cybersecurity : Google (Jan. 2024)

Tools of the Trade: Linux and SQL : Google (Jan. 2024)

English Upper-Intermediate (B2.1) : Università di Napoli Federico II (June 2026)

TECHNICAL SKILLS

Security Domains: Threat Analysis, Vulnerability Assessment, Network Reconnaissance, Threat Management, Malware Detection, SIEM

Programming & Databases: Python, SQL, Java, Bash

Operating Systems: Linux, Windows

Tools & Frameworks: Intrusion Detection Systems (IDS), Scapy, Rich TUI, Socket Programming, Git, VS Code
